**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/582,754	<b>Applicant(s)</b> ADAM, PASCAL	
	<b>Examiner</b> Karen Masih	<b>Art Unit</b> 2837	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minami et al as cited by applicant in view of White.

Minami et al disclose automatic cleaning device for surface submerged in a liquid including chassis carrying device for filtration of the liquid; units for driving chassis on surface to be cleaned; motor born on chassis and arranged for transmitting motor movement to at least one part of drive units, means for controlling motors; method including operation consisting of detecting changes in devices' inclination corresponding to its passage into a concave junction zone between two portions of submerged surface inclined relative to each other on condition that at least one change of device's inclination is detected a cleaning method is begun consists of at least tow reversal of device drive direction with at least one reversal ion each surface portion , such that device passes over concave junction zone from one portion of submerged surface to the other, see col 16 lines 46-col 17 lines 3, col 20 lines 66-coll 21 lines 67 and col 22 lines 1-10 . Minami et al doesn't specifically say at least three times. White discloses at least three times device passes over surface, see col 22 lines 35-41. It would have been obvious to one of ordinary skill in the art to combine the automatic cleaning device of Minami et al with the three times passing of White, since Minami et al discloses a

number of times the passing over a surface to clean, three times could just as well be done, also there is nothing specific about the number of passing for cleaning.
